PROFESSIONAL PROFILE

BCA graduate in Multimedia and Animation moving into cybersecurity. Completed six months of project-based on-the-job training at First Quadrant Labs and currently doing instructor-led Cyber Security and Ethical Hacking lab training at Boston Institute of Analytics. Hands-on work so far covers web application security, network and VPN security, IoT security, vulnerability assessment and security monitoring, using Burp Suite, Wireshark, Nmap, Wazuh, Sysmon and OpenVPN. Looking for an entry-level cybersecurity role to keep building these skills.

PROFESSIONAL EXPERIENCE

Cybersecurity Specialist (On-the-Job Training) – First Quadrant Labs 04 Apr – 04 Oct 2026 (6 months)

Individual, project-based training. Assignments arrived by email with requirements, deliverables and deadlines. Completed six independently, with documentation and supporting evidence, and submitted each one for review.

- **Critical Infrastructure Cyber Attack:** Researched cyber threats facing the finance sector and designed an OWASP-aligned security training programme.
- **Host Header Injection Testing:** Used Burp Suite Proxy and Repeater to intercept HTTP requests and modify Host headers, then tested how the application responded. Wrote up observations and recommendations.
- **Secure VPN for Remote Access:** Configured OpenVPN on Windows 10 with certificate-based authentication. Checked tunnel addresses and routing and reviewed the encrypted traffic in Wireshark.
- **Cryptocurrency Exchange Hack Investigation:** Studied a simulated exchange breach: the attack methods, incident timeline and impact. Recommended short- and long-term security improvements.
- **Open Redirection Testing:** Reviewed the application's security headers and tested for open redirection in Burp Suite. Documented the findings and the phishing risk of insecure redirects.
- **IoT Security in Smart Homes:** Lab work with MQTT communication using Ubuntu Server, a Mosquitto MQTT broker and Wireshark. Documented security controls such as authentication, access control and encrypted communication. Secure Boot and firmware signing were planned design areas only.

HANDS-ON CYBERSECURITY TRAINING

Cyber Security and Ethical Hacking – Boston Institute of Analytics 2025 – Present (ongoing)

Ongoing programme with 6 months of practical, instructor-led lab training.

- Practical labs on security monitoring, network defence, ethical hacking and web application testing.
- Collected and reviewed Windows event logs in virtual lab environments.
- Investigated simulated incidents and reviewed the related alerts.
- Practised network analysis and basic security assessments using security tools.
- Worked across virtual machines and different operating systems; documented findings from the exercises.

PROJECTS

Endpoint Security Monitoring Using Sysmon and Wazuh

Wazuh, *Sysmon*, *Windows Event Logs*, *Windows 10*, *Kali Linux*, *VMware*

- Set up a Wazuh server and a Windows endpoint running Sysmon, simulated WinRM-based lateral movement, and investigated the alerts and the related Windows and Sysmon events.
- Contained the simulated attack by blocking the attacker's IP address and disabling WinRM. Documented the timeline, evidence and response steps.

Network Scanning and Vulnerability Assessment

Nmap, *NSE scripts*, *Wireshark*

- Ran host discovery and port scans in a virtual lab, identified services and versions, and used selected NSE scripts for basic vulnerability checks.
- Captured the scan traffic in Wireshark, checked the results by hand and wrote up the findings.

TECHNICAL SKILLS (ENTRY-LEVEL / LAB-BASED)

Security Monitoring and SIEM: Wazuh, Sysmon, Windows Event Log Analysis, Security Alert Review

Network Security: Nmap, Wireshark, OpenVPN, Network Traffic Analysis

Web Application Security: Burp Suite Proxy, Burp Suite Repeater, Host Header Injection Testing, Open Redirection Testing, Basic Web Application Security Testing

Vulnerability Assessment: Nmap Service and Version Detection, Nmap NSE Scripts, Basic Vulnerability Assessment, Manual Review of Scan Results

Operating Systems and Virtualisation: Windows, Linux, Kali Linux, Ubuntu, VMware Workstation

Programming and Scripting: Python, Bash, PowerShell, HTML, CSS, JavaScript, Git

Security Concepts: OWASP Top 10, MITRE ATT&CK, Network Security Fundamentals, Basic Incident Handling, Cybersecurity Fundamentals

CERTIFICATIONS & COURSES

- **Introduction to Cybersecurity** – Cisco Networking Academy | Completed 26 August 2026

  Certificate ID: ff983863-fe15-41cb-8e3d-34ddb27ad7cf
- **AWS Cloud Practitioner Essentials** (online course completion) – AWS Training & Certification | December 2025
- **Cyber Security and Ethical Hacking** – Boston Institute of Analytics | 2025 – Present (in progress)

EDUCATION

Bachelor of Computer Applications (BCA) – Multimedia and Animation 2022 – 2025

Hindustan Institute of Technology & Science, Chennai
